Board members have decided that they would be responsible for the stands and purchase of fireworks and that five-man teams will assist them in the active selling.

The Sportsman's fireworks stands are to be located in Hollywood Riviera as they have done through the past years. Rivierans might remember that any purchase of fireworks should be done at the Sportsman's stands since the profits all are plowed right back into Riviera youth work.

Mining the skies

Nitrogen from the air has become a key to a plentiful supply of stainless steel

BEAUTIFUL, enduring stainless steel owes its rust-free life to the alloying metal called chromium. Other alloying metals... manganese and nickel... are vital for added strength and endurance.

Ever-increasing demands for nickel have threatened the supply of stainless steel. But the people of Union Carbide have provided an answer. Nitrogen from the air—combined with chromium or manganese through metallurgy and added to the molten steel—helps nickel go twice as far... making it possible, with the same amount of nickel, to greatly expand the chromium-nickel stainless steel output.

This is only one in a long line of contributions from Union Carbide's metallurgists during a half century of alloy making. Fifty years ago there were only a few types of steel. Today, through the use of such alloys as chromium and manganese, there are tailor-made steels to meet every need.

The people of Union Carbide are constantly at work on new and improved alloys to make better metal products for all of us.
